We're dedicated to offering the best cancer care in the area. In fact, our oncology program has been recognized with commendation by the Commission on Cancer of the American College of Surgeons as offering the very best in cancer care. It is a recognition of the quality of our comprehensive, multidisciplinary patient care. We're proud to have brought the very best in today's cancer treatment closer to home.
Message from the President/CEO

Working diligently to bring the highest quality cancer care close to home

We believe that when facing a serious medical condition like cancer, the last thing anyone should have to worry about is traveling long distances to get superior quality care. This philosophy is the driving passion behind the work we are doing today at Mercyhealth, to bring the world’s best oncology specialists, the most advanced cancer-fighting technology available today, and a compassionate team of cancer care professionals.

Since our humble beginnings in 1990, the Mercyhealth Cancer Center has helped thousands of cancer patients and their families meet the challenges of cancer head on, caring for the whole person—from detection to treatment to life as a survivor.

In 2016, we added gynecologic cancer care, and continued to push ourselves to new heights, expanding this practice area so women diagnosed with gynecologic cancers no longer needed to travel for surgery, chemotherapy and other cancer-related services. Our newest gynecologic oncology specialist is the best-of-the-best—an expert in minimally invasive, cutting-edge surgical techniques and so much more.

In 2016, we also added new 3D mammography capabilities at the Mercyhealth Breast Center in Janesville. 3D mammography is clinically proven to significantly increase the detection of breast cancers while simultaneously decreasing the number of women asked to return for additional testing. We also implemented Survivorship Care Plans to help patients thrive after treatment, and partnered with the Wisconsin Tobacco Quit Line, an initiative that helps individuals access free smoking cessation support and aids.

From cancer prevention and detection to a wide array of advanced treatment options to providing compassionate care and education, we do whatever it takes to help our patients achieve the best possible outcomes so they can live life to the fullest. It is my sincere hope that the articles in the following pages demonstrate our unending passion for making lives better for our cancer patients and their families.

Warm regards,

Javon R. Bea
President/CEO
Mercyhealth
Message from the Mercyhealth Cancer Committee Chairman

It is my privilege to present the Mercyhealth 2016 Cancer Committee Annual Report. We are committed to improving the quality of cancer care through a multidisciplinary approach. Treating a complex disease such as cancer requires expertise, compassion and collaboration. Working with a dedicated team of specialists allows us to help cancer patients cope with the multiple dimensions of their disease.

Our cancer program is accredited by the American College of Surgeons Commission on Cancer as a Comprehensive Community Cancer Program. To maintain accreditation, our Cancer Committee, comprised of members across several disciplines, meets regularly throughout the year to monitor the program and to establish goals to improve care. We strive to meet and exceed standards put in place by the Commission on Cancer.

The Cancer Committee oversees the multidisciplinary cancer care conferences that are an integral component of our program and provide a forum for collaboration among specialties. We have a general tumor conference that meets every two weeks and an additional breast cancer conference that meets monthly to review and discuss specific cases. Morbidity and mortality conferences provide supplementary educational opportunities for all cancer providers.

This past year we expanded our services to include Gynecologic Oncology. Dr. Ali Mahdavi, who is board certified in gynecologic oncology and fellowship-trained in laparoscopic and robotic surgery, joined our program to offer women with gynecologic cancers treatment closer to home. In addition, we hired Kathy van Veldhuisen, ANP-BC, ACHPN, an oncology-trained palliative care nurse practitioner, who sees oncology patients in both the inpatient and outpatient setting. She collaborates with physicians and other providers to help support cancer patients during treatment and beyond, focusing on improving their quality of life. Lastly, we initiated a complimentary oncology massage program for our patients who are undergoing treatment. Kathy Bjerke, Licensed Massage Therapist, offers massage therapy to patients free of charge in the medical oncology clinic one day per week.

Through expert staff and a comprehensive array of services, we strive to provide our patients with the highest level of cancer care, from diagnosis and treatment, through supportive care and survivorship. It gives me great satisfaction to share with you the highlights of our program as a testament to our commitment to offer the best possible care to our patients.

Emily Robinson, MD
Mercyhealth Cancer Committee Chairman
Since 1990, the Center has helped thousands of cancer patients and their families meet the challenges of cancer head on. Our comprehensive cancer care program offers the full range of resources necessary to detect and treat cancer, and help our patients not only recover, but thrive. Our entire staff—with our combined knowledge and expertise—understands what each patient is experiencing. We know that our patients require not only state-of-the-art technology to heal, but also the human touch. It is this spirit of compassion and kindness that makes our Center stand out. How do we know? Our patients tell us, every day.

Hospitalists ensure exceptional inpatient cancer care

Doctors who devote most of their practice to providing care to hospitalized patients are called hospitalists. They are experts in treating very sick patients requiring comprehensive inpatient care and are available to patients around the clock each day.

Mercyhealth’s cancer team works closely and collaboratively with hospitalists at Mercyhealth Hospital and Trauma Center-Janesville, offering the best possible care for our patients. In many cases, Mercyhealth hospitalists take responsibility for the care of our cancer patients during their hospital stay.

When a patient requires hospitalization, the oncologist contacts the hospitalist team to make arrangements. After discussing the patient’s history and treatment details, they work together to formulate the patient’s inpatient treatment plan.

During the patient’s hospitalization, Mercyhealth hospitalists offer evaluation and treatment, and frequently consult with the patient’s oncologist. While the patient’s oncologist stays involved during the entire hospital stay, most of the patient’s ‘round-the-clock care is provided by hospitalists.

The patient’s complete electronic medical record is accessible to all collaborating doctors at all times; this ensures timely and accurate communication between doctors and nurses, and the best possible treatment for the patient.

Once the patient is discharged from the hospital, he is scheduled for follow-up care with his primary care doctor and oncologist.

Keith A. Konkol, MD
Director, Mercyhealth Hospitalist

Pathology’s important role in cancer care

With the rising rates of many different types of cancers being diagnosed each year, early detection has become a primary tool for the diagnosis, treatment and management of cancer. At the forefront of early detection are the pathologist and the laboratory.

Imagine you are getting your annual checkup, and your doctor finds a small mass. You’re referred to a specialist for a biopsy. The biopsy sample is delivered to the laboratory, where it is prepared and analyzed to determine the presence or absence of disease.

Information from the laboratory is used to make approximately 70% of the choices in patient care. Pathologists are physicians who are specifically trained in the use and interpretation of laboratory tests, as well as in tissue examination, both under the microscope and by other methods. They deal with the nature, causes, and classification of cancers and other diseases, and provide the information necessary for effective cancer treatment. A cancer diagnosis is made and confirmed by the pathologist, using a number of testing methods.

Mercyhealth’s pathology and laboratory department consists of a group of experienced, well-trained and highly qualified pathologists and laboratorians, who work to ensure that all patients are cared for correctly, based on accurate laboratory testing results.

Thomas Haas, DO
Mercyhealth Department of Pathology
Each year, Mercyhealth joins other community partners in evaluating a Community Needs Assessment to determine the most pressing health issues facing our service region. Smoking is clearly where attention is needed.

While nearly everyone understands that smoking is bad for your health—and a significant lung cancer risk factor—you may be surprised to learn that the risk is even greater for Rock County residents, where the percentage of adults who smoke (18.1%) exceeds the national average.

This is alarming, as lung cancer is the second most common cancer and the leading cause of cancer death for men and women. In March 2016, in an effort to help reduce this risk, Mercyhealth’s Medical Oncology group partnered with the Wisconsin Tobacco Quit Line.

The Quit Line is a Rock County program that helps patients safely kick the habit. The program is managed by the University of Wisconsin Center for Tobacco Research and Intervention (UW-CTRI) and funded by the Wisconsin Department of Health Services.

Today, all Mercyhealth patients are actively screened for tobacco use at each appointment. Those who express an interest in quitting are offered the services of the Quit Line. This free, 24/7 service offers a host of benefits, including:

- Individualized coaching and support calls providing personalized advice on how to quit
- Assistance with choosing a quit date and creating a quit plan
- Information on medications
- Two weeks’ worth of free nicotine patches, nicotine gum or nicotine lozenges
- Secure web forum to share experiences with other tobacco users trying to quit
- Self-help materials

Patients may call the Quit Line as often as they like. The Quit Line also offers referrals to other local quit-tobacco resources and services. Most importantly, the program helps encourage the number-one way to prevent lung cancer—by helping individuals avoid tobacco smoke. Since inception, 35 participants have enrolled in the program.

To learn more about the program or to enroll, speak to your health care provider. Mercyhealth providers can help patients fill out a simple form to get started.
2015 Cancer prevention and screening focus

Mercyhealth’s multi-faceted outreach to promote prevention and awareness

Men’s health education

Mercyhealth included men’s health education at community events throughout the year where there was a strong breast health focus. A prostate cancer fact sheet was created and distributed to all Mercyhealth locations.

- Sandy Mascari-Devitt, Breast Health Navigator, provided men’s health/prostate cancer information at the booth at Project Hope and Central Christian Church in Beloit.
- Dr. Kozak gave a presentation on prostate cancer at his monthly free cancer discussion group at Mercyhealth North.

The efforts to educate the community on prostate cancer weren’t as successful as hoped. The committee agreed to expand and improve on the efforts for 2016.

Prostate cancer screenings

Mercyhealth continues to pursue innovative and effective ways to promote prostate cancer awareness and the importance of screenings that can lead to early diagnosis and higher survival rates.

- Our goal was to increase prostate screening offerings throughout the organization. On April 25, 2015, Mercyhealth South hosted an open house and offered prostate cancer screenings.
- Multi-site screenings were offered in Janesville and Lake Geneva with five men screened.

Mercyhealth staff screened seven men in 2015 which was an increase from one man screened in 2014.

Obesity and breast cancer

Mercyhealth continued its focus on obesity in relation to breast cancer.

- Sandy Mascari-Devitt presented breast health information with a focus on obesity at 13 events in 2015. In excess of 500 participants received this information.
- In addition, Sandy was featured on the WCLO radio show in October. She discussed obesity as a risk factor for cancer, guidelines for breast cancer screening, particularly in the aging population, and mammograms.

Mercyhealth 2015 community screening events

In Rock County

The following cancer screenings were performed:

- Breast: 11 patients; 7 screening mammograms were scheduled
- Prostate: 5 patients
- Skin: 13 patients; several were referred to a Mercyhealth dermatologist
- Oral: 8 patients

In Walworth County

- June 23 Mercyhealth Elkhorn Medical Center skin cancer screenings
  Of the 54 patients screened, three patients were referred to a dermatologist.
- Oct. 22 Mercyhealth Walworth Hospital and Medical Center skin cancer screenings
  20 patients were screened for skin cancer by dermatology PA Kevin Burns, PA-C.
- Oct. 26 Mercyhealth Walworth Hospital and Medical Center
  Screenings offered for breast cancer, prostate cancer, skin cancer and oral cancer.
Multi-site cancer screenings

We are always evaluating our screening events and improving them from year to year. In 2015, we offered screenings in Janesville and added a location in Lake Geneva. We doubled our screening numbers from 2014.

Based on patient feedback at previous screenings, the following changes were made:

• An evening screening time was scheduled, instead of morning sessions that had been offered in the past.
• Participants were offered the choice to schedule a mammogram at the time of the free screening. Dr. Jane Anderson volunteered to be the physician champion for any patient who requested a mammogram but didn’t have a primary care provider.
• All screening results were forwarded to the primary care physician at the request of the participant.

Data

• 37 screenings were done
• 7 patients were scheduled for a mammogram
• 1 patient was scheduled for an aspiration of a breast nodule
• 4 patients were referred to a Dermatologist for further follow-up
• 7 patients were referred to a Primary Care Physician for care
• All findings resulted in benign findings

Mercy Walworth event

• 16 patients
• Dr. Kevin Burns screened 20 patients during a skin cancer screening offered in October.

Mercyhealth continues to pursue innovative and effective ways to promote cancer awareness and the importance screenings that can lead to early diagnosis and higher survival rates.
Mercyhealth’s clinical trials program

Mercyhealth continues to demonstrate a strong commitment to using clinical trials in providing cancer care. Our clinical trial program has continued to grow since its start in 1997. We have had a variety of clinical trials available here for the treatment of many different types of cancer. We offer supportive care trials, symptom management trials and treatment trials. We provide the latest treatments in a coordinated care approach to ensure the best possible patient experience and to provide patients access to advances in cancer care close to home. In September 2015, our program underwent a routine three-year audit through the ECOG-ACRIN Audit and Quality Assurance Committee and no deficiencies were identified.

When patients with a newly diagnosed cancer are seen in Mercyhealth’s medical oncology or radiation oncology clinic, they are evaluated for participation in clinical trials. Mercyhealth’s medical oncology physicians are members of the ECOG-ACRIN Cancer Research Group (Eastern Cooperative Oncology Group and American College of Radiology Imaging Network) and the Wisconsin Oncology Network (WON). Our radiation oncologist is a member of the Radiation Therapy Oncology Group (RTOG). Through these organizations, and with the collaboration of the National Cancer Institute’s National Clinical Trials Network, the Clinical Trials Support Unit (CTSU), and the independent Centralized Review Board (CIRB), we have access to a large number of clinical trials, and are able to make them available more efficiently to better serve our patients.

The clinical trial program works closely with Mercyhealth’s own Institutional Review Board (IRB) to make sure the needs of patients who are participating in clinical trials are being met. The IRB includes physicians, community representatives and clergy. The IRB oversees the clinical trial program to protect the rights of research participants and to ensure the safety of those patients participating on trials.

Clinical trials offer an opportunity for patients treated at the Mercyhealth Cancer Center to contribute to the improvement of cancer treatment and to benefit from advances in cancer care. One advantage of participation is the extra attention patients receive before, during and after their treatment on a clinical trial.

Through our community-based program, Mercyhealth Cancer Center patients can receive the newest treatments close to home, without having to travel to a larger city. We also help interested patients navigate their way to a referral center for trials that might not be available here.

If you’d like more information about clinical trials, please call the Mercyhealth Cancer Center at (608) 756-6871 or toll-free (800) 928-1103.

Emily Robinson, MD
Mercyhealth Cancer Committee Chairman
Mercyhealth Cancer Center: Hematology/Medical Oncology

Mercyhealth’s hematology/medical oncology clinic specializes in providing care to our patients with hematologic (blood-related) and cancer diagnoses. Our experienced care team includes medical oncologists, a physician’s assistant, registered nurses (RNs), medical assistants, case managers, a dedicated oncology dietitian, patient financial counselors and numerous support staff including a medical records clerk and several receptionists.

This extensive team works together with the guiding principle of providing seamless, compassionate care to the patients needing our services. Conveniently located on the second floor of the Sister Michael Berry Building on the Mercyhealth Campus in Janesville, the clinic also offers satellite services at Mercyhealth Hospital and Medical Center-Walworth in Lake Geneva, Wisconsin.

Individualized chemotherapy treatments are provided by specially trained RNs under the supervision of our medical oncologists. Many of our RNs have advanced certifications through the Oncology Nursing Certification Corporation (ONCC). This certification recognizes their experience and expertise in providing care for patients who experience the complex problems associated with a cancer diagnosis.

Treatment plans are individually structured based on factors such as the patient’s type and stage of cancer, the patient’s response to treatment, and National Comprehensive Cancer Network (NCCN) guidelines that are based on nationally recognized protocols. Of course, new and cutting-edge treatments are always considered for patients meeting the strict criteria of research studies and national clinical trials. These treatments are set up through the Eastern Cooperative Oncology Group of the National Cancer Institute, as well as the Wisconsin Oncology Network. Clinical trial treatments are monitored on-site by our research nursing staff under the direct supervision of our medical oncologists. More information about clinical trials can be found on page 10.

Additional supportive care provided by our nursing staff includes lab draws, injections, dressing changes, mediport flushes and immunizations. These services are all given through our new Fast Track program. This program was designed with an eye on improving patient flow and access to care. It ultimately reduces wait times for our patients and has led to improved patient satisfaction.

Recently, the clinic added a dedicated oncology dietitian who specializes in educating and counseling our patients on the importance of nutrition. Our dietitian directs general informational meetings for all patients and also conducts one-on-one counseling with patients seeking further guidance.

Additionally, Mercyhealth Behavioral Health Services counselors are available to help patients and their family members with their mental health and emotional needs. This important service can be arranged through our department.

Our nurse navigator acts as a single point of contact for our patients. The nurse navigator acts as a liaison between the patient and all members of the multidisciplinary care team, including the patient’s primary care physician, radiation oncologists and/or surgical oncologists, and any support services that may be required or requested. The navigator functions, as all of our team members do, to ensure continuity of care and a collaborative approach to care for our patients.

(608) 756-6871 (800) 928-1103
Mercyhealth Cancer Center: Gynecologic Oncology

Committed to offering the best in cancer care, Mercyhealth Cancer Center is staffed by a multi-specialty team that includes medical oncologists, a radiation oncologist, oncology certified nurses and navigators, a social worker/counselor, dietitian, and financial navigator. The oncology team provides compassionate, patient-centered care through personalized treatment plans across the continuum of care, planning each patient’s individual treatment and administering therapy using state-of-the-art treatment plans and equipment. The Center is dedicated to improving cancer care through community outreach services, community education, prevention, screening programs and wellness events.

Minimally Invasive, Maximum Capability

The most common procedures Dr. Mahdavi performs are related to the treatment of uterine and ovarian cancers.

“I’m one of only a few gynecologic oncologists in the country trained in advanced laparoscopic and robotic surgery techniques,” Dr. Mahdavi says. “For patients who qualify, I provide minimally invasive surgical options for these cancers. That translates into a patient experience that typically includes faster recovery, shorter hospital stay, reduced pain level and improved postsurgical quality of life.”

Dr. Mahdavi was part of the first group in Wisconsin—and one of the first groups in the country—to perform a novel procedure called the sentinel lymph node biopsy for uterine cancer. A safer alternative to traditional dissection, this procedure allows physicians to examine pelvic lymph nodes to determine whether or not cancer has metastasized, rather than removing the lymph nodes entirely.

“With my expertise and additional training in minimally invasive surgery, I am able to perform most complex gynecologic surgeries using a technique called ‘keyhole’ surgery,” Dr. Mahdavi says. “Because I operate through a small incision site rather than the large one required for traditional surgery, the healing time for the patient is shortened.”

Dr. Mahdavi emphasizes the importance of providing personalized medicine, participating in national clinical trials and using cutting-edge technology to achieve best outcomes in cancer treatment.

“My philosophy of care is to treat the individual as a whole — body, mind and spirit — and to value my patient’s needs,” Dr. Mahdavi says. “I also believe in taking a multi-disciplinary approach to the treatment of gynecologic cancers through collaborations with other specialists, including radiation oncologists, medical oncologists and genetic specialists.”
Moving Forward

Dr. Mahdavi enjoys being part of the team at the Mercyhealth Cancer Center, which has been accredited by the American College of Surgeon’s Commission on Cancer.

“The bottom line is that I am here to support local physicians by providing gynecologic cancer care for their patients close at home,” Dr. Mahdavi says.

Women diagnosed with gynecologic cancers no longer need to travel for surgery, chemotherapy and other cancer-related services. With the expanded practice area of a specialist whose cancer services are unique to the community, the full range of treatments are now conveniently available at Mercyhealth.

“We are able to provide comprehensive care for the treatment of gynecologic cancers, including uterine, ovarian, cervical and vaginal cancers. Local services now include surgery for the treatment of cancer as well as chemotherapy and radiation therapy. We also follow our patients after cancer treatment to improve quality of life and assist them in all aspects of cancer survivorship.”
Mercyhealth Cancer Center: Radiation Oncology

We are excited to offer the highest possible quality radiation therapy to residents of Janesville and surrounding communities. Treatment options available at the Mercyhealth Cancer Center include external beam radiation therapy, intensity-modulated radiation therapy (IMRT), image-guided radiation therapy (IGRT), and stereotactic body radiotherapy (SBRT). We are committed to always raising the bar. In fact, the Mercyhealth Cancer Center’s radiation oncology department had some exciting changes in 2016.

Several new developments focus on efforts to bring stereotactic radiosurgery to Mercyhealth Cancer Center. We have acquired and commissioned the BRAINLAB iPLAN radiation planning system and the VisionRT patient tracking system. Coupled with the exceptional imaging capabilities of our Siemens® linear accelerators, these devices ensure the highest possible accuracy in radiation delivery.

These developments provided the foundation for our efforts to bring stereotactic radiosurgery to the Mercyhealth Cancer Center—something we accomplished in 2016.

One of the most significant assets of the radiation oncology department is the staff. Our team members come from a wide variety of health care settings and bring diverse experiences and expertise to the department. Our team consists of a radiation oncologist, a medical physicist, dosimetrists, radiation therapists, plus a registered nurse, case manager and patient financial counselor. Support services are provided by our friendly receptionist and cancer registry staff.

Our radiation oncologist, Dr. Kevin Kozak, joined the department in 2013. Dr. Kozak completed medical training and a PhD in biochemistry at Vanderbilt University, where he finished first in his class. He then went on to receive his radiation oncology training at the Harvard Radiation Oncology Program.

Dr. Kozak served as a cancer researcher and academic clinician prior to joining Mercyhealth and has more than 70 peer-reviewed articles, book chapters and patents to his credit. He has been recognized as a “Face of Komen” by the Susan G. Komen Race for the Cure Foundation and as a “Top Doctor” by Madison Magazine.

The radiation oncology staff is deeply committed to both community outreach and continuous quality improvement. Along those lines, the department has initiated a monthly Morbidity and Mortality conference to review side effects of cancer treatment and develop system-wide strategies to minimize these effects. More ambitiously, the department has embarked on the process to receive the American College of Radiology Radiation Oncology Practice accreditation. Finally, the department offers a Cancer Facts community discussion group where cancer topics of interest to community members are reviewed in an informal setting.

During the course of radiation treatment, our patients visit every day, Monday through Friday, for five to seven weeks. Our staff takes pride in putting patients first and providing the highest quality care available. Our patients have very positive feelings about the care they receive and the relationships they form:

“From the very first set-up session, I felt the team was dedicated to doing their part in making me cancer-free. I looked forward to each radiation session as one more day of assurance that the cancer wouldn’t come back.”

The Mercyhealth Cancer Center has always been dedicated to providing the finest quality care and the best equipment and services to the patients, families and communities it serves. This is evident in the center’s continued updates in equipment and the staff’s continued education. Mercyhealth Cancer Center’s radiation oncology department is located in the Cancer Building on the Mercyhealth Janesville Campus, adjacent to Mercyhealth Hospital and Trauma Center and the Sister Michael Berry Building.

(608) 756-6500  (800) 261-6565
3D Mammography at Mercyhealth Breast Center

Last year, Mercyhealth began offering 3D mammography exams that uses advanced breast tomosynthesis technology developed by Hologic, a worldwide leader in women’s health. 3D mammography exams using this technology are clinically proven to significantly increase the detection of breast cancers, while simultaneously decreasing the number of women asked to return for additional testing.

How It Works

The breast is a three-dimensional object composed of different structures located at different heights within the breast. These structures can overlap and cause confusion when viewed as a flat two-dimensional image. This confusion of overlapping tissue is a leading reason why small breast cancers may be missed and normal tissue may appear abnormal, leading to unnecessary callbacks. Using breast tomosynthesis technology, the Hologic system creates a 3-dimensional image of the breast structure, which enables radiologists to more clearly see through overlapping tissue to detect cancers, often at an earlier stage.

The Hologic 3D mammography system was the first FDA-approved breast tomosynthesis system in the U.S. To date, more than 8 million women have been screened with this advanced screening system.

Screening Saves Lives

3D mammography is recommended for women of all ages and breast densities. It allows Mercyhealth radiologists to more effectively pinpoint the size, shape and location of abnormalities. This leads to better detection and greater peace of mind for Mercyhealth patients.

Benefits of 3D mammography include:

• Increase in the detection of invasive breast cancers
• Increase in the detection of all breast cancers
• Decrease in women recalled for additional imaging

When breast cancer is found early, the five-year survival rate is a remarkable 96%.

State-of-the-art Diagnostics and Treatment

Because prevention and early detection are so important, Mercyhealth offers a wide range of state-of-the-art diagnostics and leading-edge treatment and superior support systems for breast cancer patients, including:

• Digital mammography with 3D tomosynthesis
• Breast MRI
• Breast ultrasound
• Breast self-exam education
• Breast cancer support group
• Breast health navigator
• Breast reconstruction or breast prostheses

Patients who would like to schedule a 3D mammogram at the Mercyhealth Breast Center are encouraged to have a discussion with their provider. To contact the Mercyhealth Breast Center direct, please call (608) 741-6999.
Mercyhealth Cancer Center: Surgical Oncology

Patients whose cancer treatment regimen requires surgery look to the Mercyhealth Cancer Center’s surgical oncology department, staffed by board certified surgeons and support professionals with years of experience. Our surgeons’ offices are located at Mercyhealth Terrace, just across the parking lot from Mercyhealth Hospital and Trauma Center-Janesville, where the surgical procedures are performed. The surgical oncology department employs:

Technologically advanced procedures, including minimally invasive techniques that use a small scope. The small incision needed for the scope to enter the body offers the advantages of faster in-hospital recovery, faster healing, less pain and minimum risks as compared to traditional surgical techniques. Screening, surveillance and diagnostic upper and lower gastrointestinal fiber optic endoscopy is also provided by the department.

A wide variety of cancer-related surgeries for all stages of cancer treatment. These include removing cancers completely in the majority of patients to permanently cure them; removing cancer that has spread (metastasized) beyond the original tumor; removing the majority of malignant tissue (called debulking) in preparation for chemotherapy; and reconstructive surgeries that help patients look and feel their best, leading to emotional healing.

Continuous multidisciplinary review of individual cases, through pathways such as the Tumor Board and the Mercyhealth Cancer Registry. In this way, Mercyhealth’s surgical oncologists review and implement quality controls, provide and receive ongoing physician education, and evaluate existing technology to guarantee our patients receive quality care that’s held to the highest standards.

Relief From the Pain: Marlene’s Story

For more than 30 years, the professionals at the Mercyhealth Cancer Center in Janesville have worked diligently to help patients and their families meet the challenges of cancer through a personalized approach. Part of this personalized approach means going beyond the ordinary to help patients manage the very broad range of symptoms and side effects a patient might experience before, during and after treatment. Today, one unique way the Center is achieving this goal is through massage therapy.

Extensive research demonstrates that massage therapy can help cancer patients find relief from pain, nausea and vomiting. As a result, certified massage professionals can specialize in cancer massage, receiving training specific to managing cancer patient pain and anxiety via massage therapy. Thanks to a generous donation from the Mercyhealth Foundation, the Mercyhealth Cancer Center now offers twice monthly massages to Mercyhealth Cancer patients. The program has been booked solid since it began.

Starting in March, Marlene underwent four weeks of radiation therapy at the Mercyhealth Cancer Center. The combination of chemotherapy, surgery, and radiation therapy did the trick: By spring 2016, Marlene was cancer-free and able to shift her focus from fighting the disease to regaining her strength. However, she still was battling neuropathy. If anyone touched her feet, she recoiled in pain. Then she heard about Kathy’s services from her Radiation Oncologist at Mercyhealth, Kevin R. Kozak, MD, and booked an appointment.

Marlene’s first appointment with Kathy wasn’t exactly relaxing—at least, not at first. Kathy started by simply touching the tips of Marlene’s toes, which felt like a sharp knife to Marlene’s hyper-sensitive feet. However, Kathy kept working at it, eventually moving to a kneading motion on Marlene’s feet, as well as massaging the side of Marlene’s chest that had not received the radiation. By the end of the session, Marlene was feeling much more relaxed. “I actually had no symptoms of tingling or pain for more than five hours after the massage,” says Marlene.

“That’s the first time I felt that good since I started experiencing neuropathy.” After that first session, Marlene touched her own feet at home to gradually become used to contact.

Marlene began seeing Kathy on a regular basis. Massage therapy has become immensely popular with the cancer patients, and Kathy’s schedule quickly filled up.

With the help of the massage therapy and the exercises she performs at home, Marlene has been steadily feeling better. She hopes to return to work once she has regained enough strength to handle the physical demands of her job. “Neuropathy is one of those mysteries,” she says.

“You never know how the nerves are going to repair themselves. But I am grateful for all the treatment I have received at Mercyhealth.”
Mercyhealth Palliative Care Program

Since January 5, 2009, Mercyhealth Hospital and Trauma Center has had an active in-hospital palliative care consultative service.

The World Health Organization succinctly stated, “Palliative care affirms life and regards dying as a normal process, neither hastens nor postpones death, provides relief from pain and other distressing symptoms, integrates the psychological and the spiritual aspects of care, offers a support system to help patients live as actively as possible until death, and offers a support system to help the family cope during the patient’s illness and in their own bereavement.”

In light of that definition, the Mercyhealth Palliative Care Program strives to offer a high-quality service for patients, and their families, with serious or life-limiting illness who are seeking life-prolonging or curative care, or are nearing the last stages of life.

The Mercyhealth Palliative Care Program accomplishes these goals by using an interdisciplinary team approach. This team includes the patient’s primary care physicians, medical and nursing palliative care specialists, plus direct care nurses, clergy and discharge planners.

Mercyhealth’s hospital-based palliative care team includes physicians and nurse practitioners, including Dr. Shekhani who is board certified in hospice and palliative medicine by the American Board of Internal Medicine. In addition, palliative care services are available in the Mercyhealth Outpatient Palliative Care Clinic in Janesville.

By visiting Mercyhealth’s interdisciplinary team, our patients and their families have the opportunity to discuss and plan the complicated goals of care, code status, transition to hospice, symptom management and their care at the end of life.

Many studies have shown that effective palliative care can manage fatigue, anxiety, breathlessness, nausea, depression, constipation and other distressful symptoms. A recent study demonstrated patients with advanced lung cancer actually lived longer when they were involved with early palliative care intervention in their diagnosis when compared to those patients who were not offered palliative care until later. Palliative care can benefit patients with cancer, congestive heart failure, emphysema, AIDS and other serious illnesses.

The Mercyhealth Palliative Care Program strives to coordinate complicated medical decisions through communication and excellent medical care to provide the highest quality of life possible for our patients with serious and life-limiting illnesses.

And after leaving the hospital, our patients can continue palliative care by using the at-home or at patient palliative care services. See p. 18 for more information.
Mercyhealth at Home Hospice ... here when you need us most

Comfort, compassion and support. That is the essence of hospice care. Mercyhealth’s hospice staff also adds generous amounts of hugs, smiles and calming touches when patients and their families need them most. When you or a loved one faces a terminal illness, we are here to help.

Since 1994, we have offered our patients physical, emotional and spiritual care during the most difficult of times. The goal of hospice is to improve the patient’s quality of life by managing pain and symptoms. We also teach family members how to comfort and care for their loved ones and each other.

Our team of specially trained, compassionate professionals including doctors, nurses, social workers, chaplains, therapists, dietitians, bereavement counselors and volunteers assess the unique needs of each patient and family. The patient, the patient’s family and loved ones, and the patient’s primary care physician direct his or her own plan of care. The patient’s needs, desires and comfort are central to all aspects of care.

Mercyhealth Hospice is directly linked to a health system, which gives us the resources and knowledge to provide our patients and their families with expert care. It also allows patients who have used Mercyhealth as their health care provider to continue to use the same trusted continuum of care.

Our hospice program offers these special services to benefit its patients:

Pet Peace of Mind® — Volunteer pet care services, foster care and potential adoption opportunities for Mercyhealth hospice patients who are unable to care for their pets while receiving hospice care. This program provides an opportunity for patients to benefit from pet visits.

Music for the Heart — A unique way to reduce stress, pain and other symptoms by offering CDs, audio recordings and singers or musicians to visit with patients at their home.

We Honor Veterans — Mercyhealth at Home holds a special pinning ceremony to honor the military service of each admitted hospice patient who is a veteran. Veteran patients are also honored at the end of their life by draping our country’s flag as they are transported from their home one last time. The flag is then presented to their family in tribute of their services to our country.

Making Memories — This program provides an opportunity for individuals, businesses, staff and volunteers to work together to grant end-of-life wishes for patients. Wishes may include getting an item a patient has always dreamed of obtaining, experiencing something that fulfills a lifelong dream, meeting someone special or a variety of other special wishes.

Massage therapy — This gentle technique helps with stress and circulation. Our certified massage therapist uses pressure points in the hands and feet to relieve pain and symptoms. This therapy is used for relaxation and comfort.

Mercyhealth Hospice offers its services to patients wherever they call home—in their own home, a hospital, an assisted living facility or a nursing home. Inpatient care and respite care are provided as needed at Mercyhealth Hospital and Trauma Center or Mercyhealth Hospital and Medical Center-Walworth where the patient is surrounded by specially trained nurses and physicians. We serve most of south-central and eastern Wisconsin.

To learn more about Mercyhealth Hospice, call (608) 754-2201, or toll-free (800) 369-2201, or visit AtHome.MercyHealthSystem.org.
The finest home health care services under one roof ... yours

Our nurses and therapists bring skilled, compassionate health care services to you, wherever you call home. We can help you become independent as quickly and safely as possible. When you’re confronted with the difficult issues of an illness, injury or aging, Mercyhealth Home Health Care is here to help you maintain the best health possible in the comfort of your own home. We offer several levels of service:

Skilled medical assistance — If you are recovering at home from major surgery or illness, Mercyhealth at Home staff will visit and help with medications, wound care, physical and occupational therapy, and other skilled services.

Personal care assistance — Our personal care aides are here to help you with important everyday tasks like bathing, washing your hair and getting dressed.

Telemonitoring service — Manage your vital health statistics seven days a week in the comfort of your home. Telemonitoring is cost effective, provides early detection of health problems, and offers a sense of security.

Anodyne therapy — A non-invasive way to treat pain, poor circulation and muscle spasm caused by a range of factors including acute injuries, chemotherapy, diabetes, vascular disease and more. Anodyne therapy also helps improve balance, function, strength and safety.

Private home care — When you need special care to live safely and comfortably at home regardless of your age or disability, consider this self-pay service.

Journey Program — Sometimes, despite everyone’s best efforts, a person’s chronic illness will progress and cause severe symptoms. When this happens, our Journey Program staff can help manage symptoms and even offer at-home chemotherapy and pain management treatments. Our nurses are cross-trained in hospice care, so if the person’s condition worsens, they can gently guide the person toward hospice services when appropriate.

Vitalstim® — Used to treat swallowing problems such as coughing, choking, and difficulty with chewing. NMES (neuromuscular electrical stimulation) re-educates the throat muscles. This specialized procedure offered by our speech pathologist can be used to treat many medical conditions that lead to swallowing difficulty.

For more information, visit AtHome.MercyHealthSystem.org.

As the charitable giving arm of Mercyhealth, the Mercyhealth Development Foundation’s mission is to inspire positive change and healing through philanthropic giving. We connect individuals with opportunities to make a difference by supporting the delivery of excellent health care services to benefit our patients and their families. Generous gifts made by donors support community outreach services, capital improvements, technological advancements and other programs that are integral to the mission of Mercyhealth.

The Mercyhealth Development Foundation provides resources and supports programs that enhance care for cancer patients and their families. Foundation funds have provided massage therapy, support groups, iPads for patient use during chemotherapy, mammography gowns, keepsake blankets for breast cancer patients, blanket warmers and other comfort needs. We partner with our cancer patients and their support teams at every step of their cancer journey.

The Oncology Massage Program, made possible by Foundation dollars, allows cancer patients to receive therapeutic massages delivered by certified massage professionals specializing in cancer massage. Massage therapy has been shown to help cancer patients manage pain and reduce anxiety. More than 200 massages have been gifted to patients since the program began in March 2016.

In addition to funding the Oncology Massage Program, within the past year, Mercyhealth Development Foundation funds paid for 11 scholarships for breast cancer survivors to attend Mercyhealth’s Journey to Health exercise program, along with several iPads for patients to use during chemotherapy treatments.

Mercyhealth Development Foundation offers opportunities for giving in several other areas including:

- General fund
- Mercyhealth at Home
- Mercyhealth NICU
- Mercyhealth Children’s Services
- Mercyhealth Rooftop Garden
- Mercyhealth Women’s Centers
- House of Mercy Homeless Center
- Autism Support Fund
- EMS Scholarship Program

For more information about the Mercyhealth Development Foundation, or ways to donate and get involved, please call Jennifer Johns at (608) 755-8821, or donate now by visiting MercyHealthSystem.org/Foundation-Resources-and-Programs.
Mercyhealth and the American Cancer Society

Partnering to help our patients

Mercyhealth works closely with the American Cancer Society (ACS), the Rock County Cancer Coalition and the Wisconsin Well Woman program to train volunteers about the many ACS programs and services. The volunteers then help cancer patients and their families find helpful programs and services that can serve them best.

We also partner in community fundraisers. In 2016, community volunteers and Mercyhealth partners raised more than $41,000 through the ACS Relay for Life. The American Cancer Society uses these funds to help patients, survivors and caregivers fight against cancer.

To learn more about ACS services, visit Cancer.org or call (800) 227-2345.

Mercyhealth Women’s Boutique

Special care for special people

Have you had a lumpectomy or mastectomy, either recently or years ago? The BOC-certified Mastectomy Fitters at the Mercyhealth Women’s Boutique can enhance your quality of life by helping you find just the right breast forms and bras.

Our experienced fitters meet with you privately to assess your needs and suggest appropriate products for a natural appearance and all-day comfort. We carry respected brands such as American Breast Care (ABC), Trulife, Amoena and Jodee.

We also provide:
• Lymphedema sleeves and pumps
• Leisure forms
• Recovery and leisure lingerie
• Swimwear
• Scarves and headwear
• Information about the Mercyhealth Association of Volunteers’ Wigs for Patients program

Our fitters can also refit you with new forms and bras if you have gained or lost weight, or if your current breast form is deteriorating.

The Women’s Boutique is located inside the Mercyhealth Mall, 1010 N. Washington St., Janesville. To schedule a free assessment and fitting appointment, please call (608) 755-7989.
**Survivorship Care Plans**

Helping survivors move forward with hope and joy

Absorbing a cancer diagnosis and then undergoing treatment poses physical and psychological challenges for patients, no matter the situation. A critical part of treatment includes a Survivorship Care Plan to help guide patients as they complete treatment and determine the best course of follow-up for their unique situation.

A report from the Institute of Medicine titled “From Cancer Patient to Cancer Survivor” stresses the importance of giving cancer survivors a comprehensive treatment summary and follow-up plan to ensure optimal health and quality of life going forward. Cooperatively drafting a Survivorship Care Plan is an integral piece of the overall treatment journey for Mercyhealth patients.

**What does a Survivorship Care Plan include?**

The Survivorship Care Plan, or SCP, is a record that summarizes and communicates what transpired during active cancer treatment. It includes:

- Care team information
- Diagnostic work-up
- Disease characterization
- Family history
- Treatment referrals
- Recommendations for follow-up care and surveillance testing and examinations
- Referrals for support services the patient may need going forward
- Any other information pertinent to the survivor’s short- and long-term care

**Who is eligible?**

The Mercyhealth Cancer Committee developed and implemented a process to formulate and disseminate Survivorship Care Plans for patients with Stage 0, I, II and III cancers that are treated with curative intent. Patients typically receive planning services after they have completed initial therapy.

At present, Survivorship Care Plans are provided for patients with breast, lung, colorectal, head and neck, prostate, non-Hodgkin’s lymphoma or general cancers; a gynecologic care plan is in development. Patients who have taken advantage of care planning thus far have welcomed the process, communicating how much they appreciate the information and peace of mind it provides.

**Mercyhealth cancer groups**

Do you or someone you know have cancer? Perhaps you are a caregiver for someone with cancer? These groups are offered for you and your friend or family member.
